

1. INTRO

My name is **Jeff Levin**.

We import **lightweight, motor vehicle trailers designed to allow you to move heavy things by yourself.**

It's called **Ground Loading** technology, so **no heavy lifting** needed.

Our company is called **Rampless**, meaning "without ramps."

2. CHALLENGE

So, how does one move heavy things safely on your own?

You know previously, people shared home with large families, lived in fairly tight neighborhoods and worked in organizations with lots of staff.

Nowadays, the kids are soon out of the house and we often don't even know our neighbors. When we go to work, with so much focus on efficiency, people are generally busy. Not surprisingly, we end up mostly **needing to do things by ourselves.**

Some of us may be **physically strong**, so this may not appear to be a problem but the truth is, that in time, **we break down.**

So what do we do, if something needs to be moved that is, **simply, too heavy** to carry?

Well that's why I'm here..

YOU CAN.. MOVE HEAVY THINGS SAFELY, ALL ON YOUR OWN

3. SOLUTION

*The **elegant solution** lies with using **wheels** rather than strength... coupled with a **Ground Loading trailer**.*

It works like this..

Heavy items are rolled onto the trailer platform, secured in place and then winched up into position for transport.

So, loads are simply wheeled on and off, giving men and women, young and old, the independence to single-handedly, safely move heavy items.

4. MULTI-PURPOSE

Rampless has tended to focus on motorcyclists, but you can really wheel almost anything under half a ton, onto a Rampless trailer.

5. WIND UP

Feedback without exception, is that Rampless users **love** their **ground loaders** because it gives them the **confidence** and **independence** to move heavy things **safely**, all on their own.

If you are **interested** to try this out, please **contact** me on my mobile or through our website at rampless.net. I'd look forward to chatting or meeting up.
